Result page: [1](#) [2](#) [3](#) [next](#)Relevance scale ☐ ☐ ☐ ☐ ☐**1** [Integration of large-scale linguistic resources in a natural language understanding system](#)Lewis M. Norton, Deborah A. Dahl, Li Li, Katharine P. Beals
August 1998

Full text available: pdf(358.24 KB)

[Publisher Site](#)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

Knowledge acquisition is a serious bottleneck for natural language understanding systems. For this reason, large-scale linguistic resources have been compiled and made available by organizations such as the Linguistic Data Consortium (Comlex) and Princeton University (WordNet). Systems making use of these resources can greatly accelerate the development process by avoiding the need for the developer to re-create this information. In this paper we describe how we integrated these large scale lingu ...

2 [A test environment for natural language understanding systems](#)Li Li, Deborah A. Dahl, Lewis M. Norton, Marcia C. Linebarger, Dongdong Chen
August 1998

Full text available: pdf(400.11 KB)

[Publisher Site](#)Additional Information: [full citation](#), [abstract](#), [references](#)

The Natural Language Understanding Engine Test Environment (ETE) is a GUI software tool that aids in the development and maintenance of large, modular, natural language understanding (NLU) systems. Natural language understanding systems are composed of modules (such as part-of-speech taggers, parsers and semantic analyzers) which are difficult to test individually because of the complexity of their output data structures. Not only are the output data structures of the internal modules complex, b ...

3 [Descriptions of system demonstrations: NL assistant: a toolkit for developing natural language applications](#)Deborah A. Dahl, Lewis M. Norton, Ahmed Bouzid, Li Li

Relevance scale ☐ ☐ ☐ ☐ ☐**1 Beyond striping: the bridge multiprocessor file system**

P. C. Dibble, M. L. Scott

September 1989 **ACM SIGARCH Computer Architecture News**, Volume 17 Issue 5Full text available: pdf(644.43 KB) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

High-performance parallel computers require high-performance file systems. Exotic I/O hardware will be of little use if file system software runs on a single processor of a many-processor machine. We believe that cost-effective I/O for large multiprocessors can best be obtained by spreading both data and file system computation over a large number of processors and disks. To assess the effectiveness of this approach, we have implemented a prototype system called Bridge, and have studied its perf ...

2 Managing expert systems projects: factors critical for successful implementation

Dave Dibble, Robert P Bostrom

March 1987 **Proceedings of the conference on The 1987 ACM SIGBDP-SIGCPR Conference**Full text available: pdf(3.00 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Over the last decade, the Artificial Intelligence research community has successfully created a number of "expert" systems capable of solving problems in limited domains. Noting the demonstrated feasibility of such an approach to problem solving, a number of firms have moved toward incorporating this technology into their portfolio of information system tools. The scarcity and geographic limitations of human expertise, coupled with the tirelessness of machines, are the motivatio ...
